**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mau on December 4, 2007.

The application has been amended as follows:

In the Claims:

Claim 34, page 9, line 4, "type" has been deleted;

Claim 34, page 9, line 10, "is configured to" has been deleted;

Claim 34, page 9, line 10, "extend" has been replaced with --extends--;

Claim 34, page 9, line 11, "engage" has been replaced with --engages--;

Claim 34, page 9, line 11, "abut" has been replaced with --abuts--;

Claim 34, page 9, line 17, --adjustable-- has been inserted before "screw body";

***Allowable Subject Matter***

Claims 34-39 are allowed.

The following is an examiner's statement of reasons for allowance:

The applicant's independent claim, claim 34, has several similarities as well as differences with the Killingstad patent (US 4,825,507). Both disclose an adjustable

hinge device for a door assembly comprising a door leaf and door frame, said hinge device having a first one of its hinge flaps fixable with screws to the door frame, and a second one of its hinge flaps attachable to the door leaf of the door assembly, said first and second hinge flaps each of a single piece, flat member portions of which in a closed state of the door assembly are facing each other in a recess of the door frame. Further disclosed by both the applicant and Killingstad is an adjustable screw body that is adjustably fastened in a vertical member of the door frame for abutment with part of a rear face of the flat face portion of the first hinge flap. Also disclosed by Killingstad is a fastening screw, wherein said fastening screw and said adjustable screw body provide for angular adjustment and fixing of the hinge flap relative to an adjacent portion of the door frame vertical member facing the rear side of the first hinge flap and in cooperation with a tilting location on the hinge flap. However, where Killingstad fails in anticipating applicant's invention is with the fastening screw that extends through a hole in the flat member portion of the first hinge flap and engages a threaded axial hole in said screw body. The Killingstad patent fastening screw (13) does not extend through the adjustable screw body (5); thus failing to meet a specific limitation in independent claim 34. Further, there would be no motivation to modify the Killingstad patent since no added value is perceived by one of ordinary skill in the art for such a modification. Other patented similar devices, such as Watson (US 3,483,586) include the limitation of a fastening screw engaging a screw body as claimed in the applicant's invention, but fail to provide for angular adjustment with the incorporation of a tilting location on the hinge flap.

None of the other prior art references whether taken alone or used in combination cure the deficiency of Killingstad. Thus, the prior art as a whole made of record does not disclose or suggest the structural arrangement or the combination of structure set forth in Applicant's claims. As a result, the Examiner believes Applicant's claims as presented are patentably distinct from the prior art of record and the general prior art pertaining to adjustable door hinges.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
